

Unified Threat Management

Comprehensive Security Solutions

SAFEGUARD YOUR NETWORK AND INFORMATION ASSETS FROM EVOLVING CYBER THREATS.

Unified Threat Management (UTM) service provides full peace of mind with network-based security, content filtering and cost effective Virtual Private Network (VPN). Without requiring a dedicated Internet gateway or firewall on site, Fusion Connect UTM detects and blocks malicious or unwanted traffic before it impacts your network and broadband connectivity. By centralizing the enforcement of your network access policies in the Fusion Connect network, you may efficiently update your network topology without having to reconfigure your security devices. Whether you are using one of Fusion's numerous cloud connectivity solutions, or leveraging a 3rd party failover circuit, rest assured that all your network traffic will be subject to the same security and content policies you have defined for the whole enterprise.

Firewall

With Fusion Connect Firewall, protect your network without equipment deployed at each location. From the network in, you control what applications and content can reach your enterprise. Once policies are established, Fusion Connect provides 24x7x365 monitoring and alert responses. Pricing is flexible and adjusts to your aggregate network bandwidth so you can match your cost with your network needs. Fusion Connect Firewall helps set varying levels of access for different users and applications. Our ongoing monitoring and alerts will help detect, deter and mitigate the impact of cyber attacks and business disruptions.

Content Filtering

With multiple options of static and category-based content filtering, Fusion Connect will help you maximize the use of your network for your business purposes, while keeping unwanted and unproductive web traffic out. Content policies are centrally defined for the entire customer network or by location, and enforced for inbound and outbound traffic as data traverses the security gateways strategically located in the Fusion Connect cloud infrastructure. In addition, enterprise-strength data loss prevention technology monitors outbound traffic to prevent sensitive data from leaving your network.

The Fusion Connect Advantage

Single Source for the Cloud

Fusion Connect offers a full range of cloud communications, cloud connectivity and cloud computing solutions – available nationwide.

Expansive Network Coverage

Bring your own broadband or leverage our broad range of nationwide connectivity options.

Proven Expertise

Put over 20 years of experience designing and managing networks to work for you.

Experienced Customer Support

Our expert, U.S.-based technical experts respond quickly and efficiently, 24/7/365.

PROTECT AGAINST MALICIOUS ATTACKS AND COSTLY DOWNTIME.

Antivirus/Antispyware

Viruses, spyware applications and malware threats are created to throw off enterprise defenses, leaving IT staff vulnerable. Fusion Connect anti-virus and anti-spyware definitions and footprint are updated to quickly and effectively maintain the highest level of protection from outside your network infrastructure, before the threat ever impacts your corporate network assets.

Intrusion Detection/Prevention Systems

The Fusion Connect Intrusion Detection System (IDS) scans and reports unwanted traffic for proper action. As threats are more frequent and complex, automated and immediate corrective action must be taken. The Fusion Intrusion Prevention System (IPS) scans real-time traffic in line, and drops malicious packets, blocks traffic from suspect sources and resets network sessions to keep it free of unwanted traffic. Fusion Connect's centralized and enterprise-grade IPS is scaled to rapidly scan and act on all traffic real-time, leaving on-premises equipment free to perform other routing functions.

Remote Office Firewall Security

To maintain complete network integrity and protection, remote customer locations with their own dedicated Internet connections must maintain the same policies as other network locations, with the same effectiveness and speed. UTM provides Remote Site VPN applications to help protect these locations and keep them in synch with the centrally-managed network assets.

Service Packages

With UTM, you can select from a variety of options and pricing plans best matched to your security needs. Unlike other security solutions, you may add more locations as your business evolves, with no need for additional equipment and additional fees. What's more, software-client based VPNs are included in all packages at no extra charge (limits apply).

TECHNICAL SPECIFICATIONS

Industry Leading Technology

Fusion Connect Firewall & UTM is delivered through our partnership with Cisco, a global leader and innovator in Private Networking and Security.

Cloud Management

Fusion Connect manages your entire IPsec VPN WAN remotely. For your security, our cloud-based management platform provides state-of-the-art security features like dual-factor authentication and password enforcement policies and comes with SSAE 16 and PCI compliance. For added security, the control plane separates network management data from user data. Management data (e.g., configuration, statistics, monitoring, etc.) flows from security appliances to our cloud over a secure Internet connection. User data (web browsing, internal applications, etc.) does not flow through the cloud, instead flowing directly to its destination across the WAN.

Simple Licensing

Fusion Connect Managed Networking and Security services offer simpler licensing than comparable offerings: Buy one cloud management license per appliance.

Enterprise License includes:

- Stateful firewall
- Site-to-site VPN
- Client VPN
- Branch routing
- Link bonding and failover
- Application control
- Web caching

Advanced Security License includes all Enterprise License features, plus:

- Content filtering
- Intrusion detection/prevention service
- Antivirus and Anti-phishing
- Geography-based IP rules - Use Layer 7 to deny/limit international network traffic to your organization
